Restart of the A-Furnace at the Gerresheimer Facility in Millville, NJ

Gerresheimer US Moulded Glass Division has completed the re-building and re-engineering of its A-Furnace at their Millville, NJ facility. The manufacturing of Type 2 and Type 3 products in both amber and flint (clear) glass has been resumed.

The restart is a milestone for our US Moulded Glass Division in two respects. It stresses our commitment to the markets we serve across several industries. And, even in times when competitors are forced to close down plants or reduce capacities, we show global leadership in the moulded glass packaging industry by investing in improved technologies and existing platforms.

The rebuilt furnace considerably enhanced its performance of the melting system and related combustion control. Additionally, emissions are reduced in accordance with state and federal laws.

Focus on Quality, Safety, and the Environment

We work with state-of-the-art technologies and in accordance with the highest regulation of quality and product safety. Millville plant is certified in accordance with DIN EN ISO 9001-2008 and oriented towards the GMP standards. Our products meet USP, EP and JP specifications.

Environmental protection concerns and threats associated with climate change motivate us to improve our energy, resource consumption and emission management. We are actively involved in one of the world's biggest environmental initiatives, the Carbon Disclosure Project which surveys corporate greenhouse-gas emissions worldwide.

Millville and Chicago Heights – US Moulded Glass plants of the Gerresheimer Group

Gerresheimer Glass Inc., a subsidiary of the Gerresheimer Group, operates two Moulded Glass plants, Millville and Chicago Heights. Chicago Heights Plant is a premier manufacturer of Type 1 flint borosilicate glass working in close harmony with the Millville Plant. The two Gerresheimer facilities have the capability and expertise to manufacture any desired products in Type 1, Type 2, and Type 3 in both flint and amber.

Gerresheimer is an internationally leading manufacturer of high-quality specialty products made of glass and plastic for the global pharma & healthcare industry. Our Group of companies manufactures in Europe, North and South America and Asia. It employs around 9,400 people. Through top-class technologies, convincing innovations and targeted investments we are systematically expanding our strong market position.
