## Trainee Program

### Technical Engineering

Do you have a Master's degree in your pocket and you are now looking for new perspectives and interesting challenges in an international environment? Then apply now to be one of our trainees. We offer you the possibility to try out several areas before deciding to focus on one. We will support and challenge you and – together – we will find out in which area you can develop your skills the best and which position is most suitable for you and your talents.

You will be assigned to our Business Unit Plastic Packaging and support a core assignment area during your 18-month trainee program. You will engage across different plants and departments within this business unit. Apart from your assignment abroad and in another business unit, there will also be an assignment in our headquarters, allowing you to get familiar with our corporate structure.

During your trainee program with a Technical Engineering focus you will be engaged in a wide variety of projects. These projects include areas of process optimization, value creating and optimization validation, record and exchange of best practise between our units, etc. You will evaluate production schedules, plan machine loading and execute schedules to support production requirements. Furthermore, you will determine root causes for equipment failures and process losses and develop ways to eliminate them. You will assist manufacturing personnel with technology and project specifics and structure project activities to meet budget, performance and schedule goals. Moreover, you will be involved in ISO related activities, safety audits, Kaizen events, etc. and maintain and handle daily activities related to 5S and our Gerresheimer Management System.

Are you eager to learn our technologies, equipment and processes, willing to travel and able to work both independently and as part of a team? On the personal level, do you possess passion, commitment and enthusiasm?

What are you waiting for? Go! for it! We are looking forward to receiving your application, preferably via e-mail.

# GERRESHEIMER

#### Duration

18 months

#### Location

Vaerloese, Denmark

#### Requirements

You successfully finished your Master's degree (in plastics, polymer, technical, manufacturing or industrial engineering) and have good English skills, proven by experience abroad or a relevant certificate. Ideally you already have first experience (professional experience, internships, studies) in working in a fast paced operational environment with constant interaction with operators, technicians and equipment and in analyzing manufacturing processes, developing process improvements and validating process changes. Moreover, knowledge of Six Sigma, Kaizen, Lean manufacturing and 5S is an advantage.

#### Application date

Any time
