

**Presentation at the Partnership Opportunities in Drug Delivery
Thursday October 08, 2020
2:20 pm ET
Track 1B: Prefilled Syringes, Autoinjector and Similar**

Title:

Gx InnoSafe® - "Safety syringes in ready-to-fill configuration"

Abstract:

It is everyday life for health care workers to handle blood contaminated injection needles which leads in some cases to a contraction of serious diseases. It is estimated that there are about one million needlestick injuries in Europe every year.

In the last decade regulations have been implemented to improve the safety of the healthcare professionals. These regulatory requirements triggered the development of various systems to prevent needlestick injuries.

Latest legislative revisions imposed new challenges to be considered in terms of developing new products in this field. With Gx InnoSafe® Gerresheimer aims to address these requirements by offering a custom-tailored and ready-to-fill solution for a wide range of applications.

Bio:

Maximilian Vogl studied engineering, patent management and innovation management at University of Applied Sciences Amberg-Weiden, Germany. 10 years ago he started his career at Gerresheimer. Today he is part of the Business Development of Gerresheimer Medical Systems. In his function as head of product management he focuses on market analysis and new product developments in the field of primary packaging and injection devices for drug delivery.
