Product database supporting registration in any country in the world

Gerreheimer Plastic Packaging has developed a database with product specifications of all our standard products. The specifications include a product description of our standard products and all relevant information, specifications, details, declarations and test results to be used to register the product.

Having access to this database gives you a lot of benefits:

- 1 It smoothen your product registration process, as all relevant information is just a click away and can easily be inserted into your own file
- 2 It ensures you a complete overview of all standard products, which all can easily be provided to you with short lead times all over the world

- 3 It supports your internal documentation, testing and approval with all relevant certificates and test results
- 4 It always have up-to-date information of any specific products and you can easily get it printed

It is very easy for you to get access; all you have to do is ask your Sales Manager or your Customer Care Center assistant to create an account, after which you will receive login details via e-mail. The first time you log in to the database, you will have to accept the terms for accessing the database and all information is then available to you.

USP <661.1>

Gerresheimer Plastic Packaging has successfully implemented USP chapters <661.1> and <661.2>. Our standard white products are tested according to the physicochemical tests from USP chapter <661.2> and uploaded into our product specifications. Test results are gleaned according to USP chapter <661> and are available on request. Due to a lot of questions and doubts relating to the requirements, FDA has decided to postpone the implementation of the two chapters until May 1, 2020.

Triveni, Kundli: new ophthalmic product range

Gerresheimer Plastic Packaging specializes in a wide spectrum of pharmaceutical plastic packaging for solid, liquid and ophthalmic applications. Triveni, our leading company and brand in India, has extended its product range to include the production of ophthalmic applications. Dropper bottles in the sizes 5, 10 and 15 ml are now offered to our customers. The entire manufacturing process is certified in accordance with ISO standards.

Vials and ampoules from Kosamba, India

The new tubular glass facility at Kosamba in the state of Gujarat, India, manufactures high-quality vials and ampoules. The modern facility is an example of Gerresheimer's continuous investment in world class manufacturing technologies, compliance systems and employee training. Gerresheimer uses SAP's validated Enterprise Planning Systems (ERP) to provide full traceability from raw materials through to packing lots and vice versa. The skilled Kosamba Team embraces the philosophy of continuous improvement to produce high-quality vials and ampoules.

The plant operates under current Good Manufacturing Practices (cGMP). It is certified in accordance with ISO 9001-2015 and ISO 15378-2015 for both vials and ampoules. The facility is also certified under US DMF Type-III and DMF Health Canada. We use Gerresheimer standardized machines, technology, quality and processes and provide products and services to customers primarily in India and South East Asia region.

FEATURES:

- Gx® G3 inspection for cosmetic defects
- Gx® RHOC inspection for dimensional defects
- Clear and amber vials from 2 ml – 30 ml: snap-on & crimp, screw neck, with printing facility
- Clear and amber ampoules from 1 ml – 30 ml with OPC, CBR and color coded rings (all B, C and D types)

Commitment to quality

Technicians at the microbiology and quality assurance labs monitor the quality level of the process, environment and products. The laboratories are equipped with qualified computer based analytical equipment. At Gerresheimer India, a team of talented people applies new ideas and technologies to produce the best products for customers while meeting stringent quality requirements. Their pride, attention to detail, and dedication to quality characterize Gerresheimer as an industry expert and leader which deliver premium-quality products and services that enhance the administration of pharmaceuticals and improve healthcare for millions around the world.
