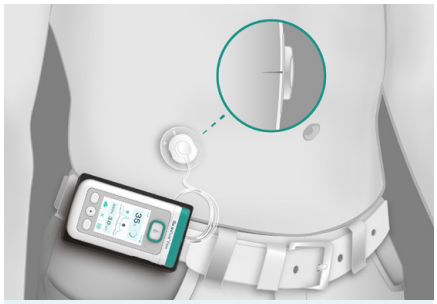
Gx InPuls™ Flex infusor

24/7 wearable infusor that flexibly adapts to a patient's therapy needs

- Improved patient independence with a belt-worn design, simple set-up, full graphical guidance, and safety alarms
- Delivery profile adaptable to individual needs with data capture to enable HCP-supported interventions
- Reliable 24/7 therapy with precise, controlled delivery of small and large molecule drugs up to 20 mL
- Reduced environmental impact and cost thanks to a rechargeable electronics unit with lifespan of up to 3 years

gerresheimer
innovating for a better life

Patient independence & personalized care



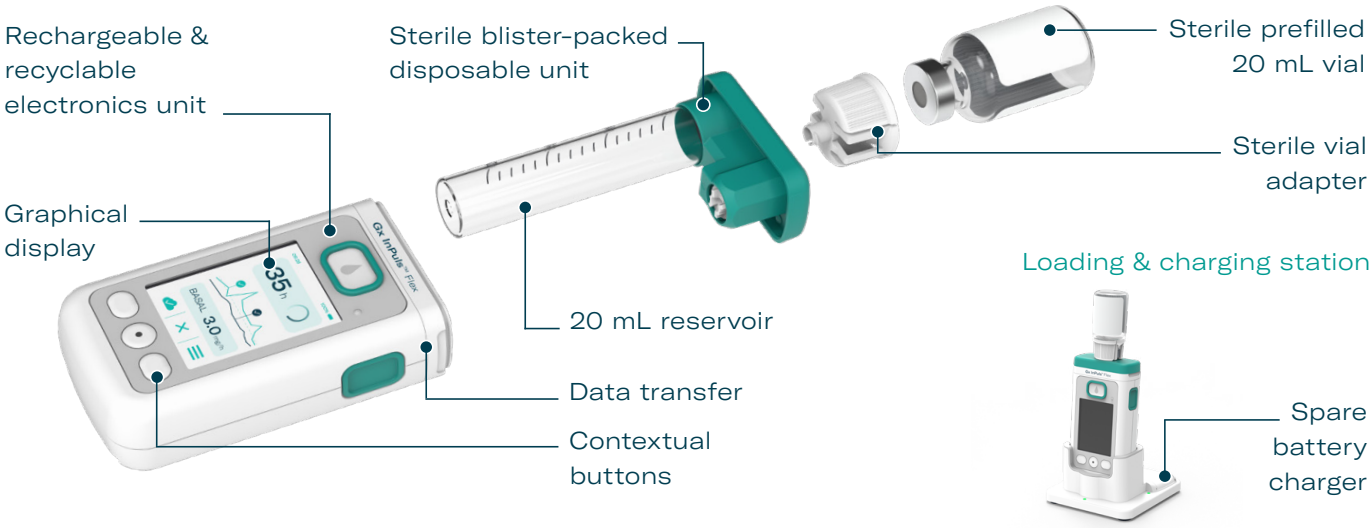
- Freedom of movement with belt-worn design
- Simple set-up with guidance via graphical display
- Audible alerts give assurance and help avoid errors
- Uninterrupted therapy with 2 rechargeable batteries
- Data transfer to HCPs for therapy customization

Reliable, adjustable 24/7 therapy

- 24/7 delivery for treatment of chronic disease with adjustable flow rates, basal and bolus profiles
- Gradual infusion can be programed over a few hours up to several days
- Accurate low-increment dosing of small and large molecules with SensCore micropump

Lower environmental impact & costs

- Developed in line with ecodesign principles
- Reusable unit can be recharged & reused for up to 3 years, which can decrease carbon footprint and costs
- Less waste as electronics are within the recyclable RU
- No need to sterilize the RU which reduces emissions



Quick customization of proven technology

Our adaptable platform concept enables quick tailoring to different therapeutic areas and medicines. This reduces development risk and time-to-market for our customers.

As a system and solution partner we are experts in development, manufacturing, and regulatory submission. We work closely with pharma to create patient-centric combination products.

Development risk is further reduced as a combination product based on the device is on the EU market from EVER Pharma delivering apomorphine to treat Parkinson's disease.
