# Siliconization

## Your Added Value for Your Clients

Gerresheimer glass is the perfect choice for your innovative pharmaceutical packaging solution. Adding a layer of silicon-based coating to your premium glass containers ensures that your drug will be delivered in excellent condition. This will help you to maximize the value of your pharmaceutical product and keep your patients safe.

### Siliconization ...

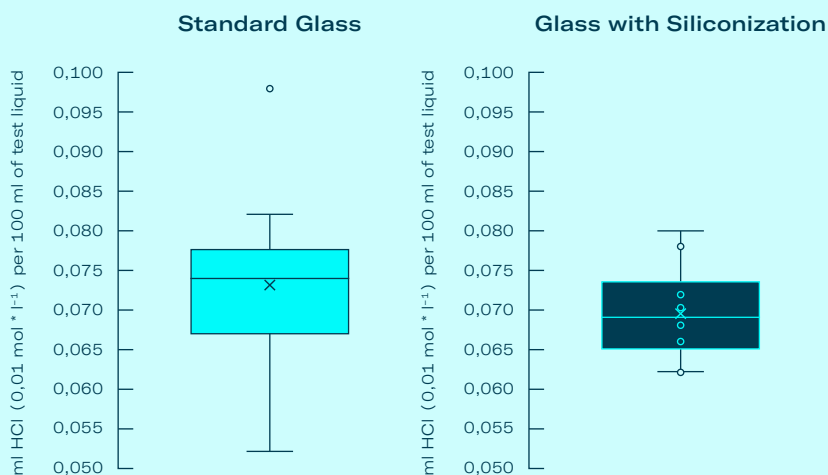

is a process that can be applied to many different types of glass containers to improve their performance:

- Type I, II or III glass
- Broad variety of volumes immediately processable (5 ml to 500 ml)
- Flint or amber

### Key benefits:

- High restitution rate down to the last drop
- Securing that your patient will have the correct dose of medication every time
- Provides an extra layer of protection to reduce the interactions between the API and glass container surface
- Distribution range of the hydrolytic resistance decreased

### Reduced Variability of Hydrolytic Resistance\*

\*using the example of Type II glass

### Innovative Pharmaceutical Packaging Solutions are our business

Our unique treatment process helps to protect your pharmaceutical products. Our stringent quality control measures ensure that your products are of the highest quality, while our experienced team provides valuable support throughout the entire production process.

Contact us today to learn more about our world-class glass packaging solution!
