

GERRESHEIMER

Nasal sprays hermetically sealed

- New snap-on bottle for metering pump systems
- New crimp bottle for pump systems with aluminium collar

Spray and pump systems: New 20 ml snap-on bottle and new 15 ml crimp bottle

Nasal sprays are used to treat and look after your nose. The liquid is applied to the nasal mucous membrane as tiny aerosol particles by means of a spray system. To activate the system, the spray bottle opening is inserted into the nostril and one dose is released by pushing down the nebulizer.

Spray and pump systems ensure nasal sprays are hermetically sealed, allowing the contents to be optimally protected against impurities until the sprays are used. With our new 20 ml snap-on bottle and our new 15 ml crimp bottle and our existing bottle range we are now capable of delivering bottles for the most renowned spray and pump systems in the market. The profile of the new bottles fulfils all existing certification and regulatory requirements.

REQUIREMENTS

- Looking for a safe fit of pump and bottle
- Looking for a simple and easy to use system
- Looking for a tight solution without a lock system
- Looking for a packaging of preservative-free formulations

ADVANTAGES

- Both snap-on bottles and crimp-on bottles available
- The bottles fit the most renowned spray and pump systems
- State of the art solutions available, customization possible
- Easy assembly of pump and bottle

FEATURES

- Material: Bottle HDPE
- 10 to 20 ml snap-on bottles
- 15 to 20 ml crimp bottles for aluminium collar pumps
- Available in other materials, sizes and designs
- Manufactured under clean-room conditions
- Bottles produced by injection blow molding (IBM)

PROOF

- The snap-on and crimp bottles are fulfilling all existing certification and regulatory requirements
